EZ-TILT

The Superior Engineering EZ-Tilt was designed to enable an operator to lift large, heavy, and awkward bundles or rolls that are normally moved by a manual hand truck. This design eliminates back breaking man hours and converts them into productive work hours. This attachment also decreases the chances that an operator will cause injury to him/herself in the workplace.

The operator slides the lip underneath the bundle/roll until lip is fully engaged and then uses the upper squeeze arm to squeeze and secure the load. The operator then tilts the attachment back and travels to his destination. When arriving at the destination, the operator tilts the attachment forward and raises the squeeze arm to release the load and then backs away from the load.
