SUPERIOR FORK SPACER

SUPERIOR FORK SPACER

Superior Engineering Fork Spacers offer a solution to forks protruding too far into a product or fork pockets. If the operator experiences a need to have shorter forks at times, then the fork spacer is a perfect alternative to buying or having to change out forks to a new set. The design is simple. The unit slips over the forks and the upright portion of the Fork Spacer acts as a backrest for the load. Dimensions and spacing can be customized for your application.

STEEL CONSTRUCTION
