MANIPULATOR ATTACHMENT

Superior Engineering works together as an integrator with material handling dealers, pneumatic specialist and end users to develop, install and connect mobile forklifts with pneumatic manipulator arms and end effectors. We install the latest pneumatic systems and fabricate our own reservoir and mounting systems to better utilize the given space in a more compact fashion. We will install these units on electric pallet trucks, order pickers, counterbalance trucks or stationary units. We understand that each application is unique and in most cases a plant visit is required by one of our pneumatic specialists.
