FURNITURE HANDLER

Superior Engineering furniture handler modifications convert standard electric pallet trucks or tuggers into a complete furniture handling system that can scoop, lift, tilt, and transport various pieces of furniture, making loading and unloading simple and safe. Once furniture pieces have been picked up and positioned, the operator can transport them to a loading dock, down aisles, across warehouses, or anywhere else a standard pallet truck can go. Furniture handling modifications are typically mounted to a center control unit and come with any size platen that suits your handling needs.
