# MANIPULATOR ATTACHMENT

Superior Engineering works an integrator with material handling dealers, pneumatic specialists, and end users to develop, install, and connect mobile forklifts with pneumatic manipulator arms and end effectors. We install the latest pneumatic systems on electric pallet trucks, order pickers, counterbalance trucks, or stationary units, then fabricate our own reservoir and mounting systems to utilize the given space in a more compact fashion. Each application is unique; in most cases, a plant visit from one of our pneumatic specialists will be required.
